

NetSource C-Band Hybrid Assemblies

When it comes to your RRU and FTTA deployments, efficiency, and customization are key. Our hybrid jumpers are the perfect solution, offering faster deployment times and greater scalability than separate power and fiber cable configurations.

Our hybrid jumpers are built to your specific needs, whether you require a custom length, connector type, breakouts, or color coding. Our expert team of engineers and technicians can work with you to create a solution that is tailored to your unique requirements.

Made in the USA and readily available, our jumpers are crafted with the highest quality materials and manufacturing processes, ensuring the reliability of your network equipment.

Don't settle for a one-size-fits-all solution. Choose our hybrid jumpers for a customized and efficient solution that meets your unique needs.

Features

- Cable is constructed with an overall 3Mil BC tape under a flame-retardant black PVC jacket
- Power is constructed with UL type THHN/THWN-2 600V
- In-stock 6 or 8 AWG with fiber counts up to 6 fibers
- All assemblies are built to order with standard or custom breakouts and lengths
- Assembled in the USA
- Turnaround time of 2-3 days
