

Pullable Fiber Cable Assemblies

NetSource Pullable Fiber Cable Assemblies are designed for strength and durability. With a robust 3mm cable jacket and bend insensitive fiber, these pre-terminated assemblies ensure reliable and discreet installations. Incorporating bend insensitive single-mode fiber offers flexibility during installation, making it ideal for limited space or navigating obstacles. It allows easy routing through narrow conduits, tight corners, or crowded areas without significant loss or degradation.

The pullable, like the pushable, connector is designed to fit through a 3/8" opening. The two cables can be distinguished by the presence of a built-in pulling eye in the pullable cable. This convenient feature enables installers to effortlessly pull the connector through openings, eliminating the need to use any additional tools. This streamlined installation method saves time and eliminates the hassle for splicing or creating unsightly wall holes when connecting to the Optical Network Terminal (ONT).

Using NetSource Pullable Fiber Cable Assemblies ensures a seamless and efficient fiber optic installation. The elimination of splicing and the convenience of tool-less installation reduce costs and time. It provides a clean and aesthetically pleasing solution while ensuring connectivity from the assembly to the ONT.

Features

- Tool-less installation (drill 3/8" hole to insert cable)
- Reduces installation costs
- Eliminates in-field splicing
- Customize cable to meet your specific needs
- Easily installed
- Available in armored and non-armored cables
- Built-in pulling eye
